

Gentlemen:

As an operator of a narrow-bandwidth mode on the amateur radio 160m band, I strongly support RM-10352. It is necessary to make this amateur band consistent with the other amateur radio bands which have a required separation of narrow-band and wide-band modes. Without such required separation, one wide-band signal can seriously degrade a number of narrow-band communications at the same time.

Your approval of this petition will be greatly appreciated and allow more effective use of this limited resource.

Sincerely,

Robert N. Tellefsen

Amateur Radio Station N6WG
